Researching Other Invasive/Exotic Species

Research 2 invasive/exotic species (animals or plants) that we haven’t discussed in class already that may threaten native species in the United States. My website has several links that you can use to make the research easier, or you can find information on your own. (10 points)

If you want to present your research to the class you can earn 5 extra credit points.

Name of Organism #1 ______________________________

• Where did it come from originally? (where is it native to)

• How or why did it appear in the United States?

• What kinds of problems is it causing?

• Is there anything being done to stop or control the spread?

• Give two personal reactions to what you have learned.
